STATE OF MONTGOMERY COUNTY BRIDGES

Based on 2017 Inspection

INTRODUCTION:

Bridges, the key links in America's highway system, are deteriorating more rapidly than they are being repaired, rehabilitated, or replaced. According to the Bridge Maintenance Training Manual published by the U.S. Department of Transportation, Federal Highway Administration in 1994 (FHWA-HI-94-034), of the roughly half million highway bridges in the U.S., more than 200,000 are deficient. More than 130,000 bridges are posted for restricted weight, and about 5,000 are closed. Every year, on average, between 150 and 200 spans suffer partial or complete collapse.

The problem is often a result of inadequate maintenance and funding. Damage resulting from salt-contaminated debris buildup, plugged drain pipes, leaky joints, and failed paint systems accelerate deterioration and compound repair requirements year after year. If left unrepaired, the damage ultimately imposes either a severe limitation on the operational capabilities of the structure or significant additional repair costs at a later date. Our experience in Montgomery County, Maryland has shown that in some cases the delay of repairing/rehabilitating a structure by one year - due to funding constraints - has escalated costs significantly.

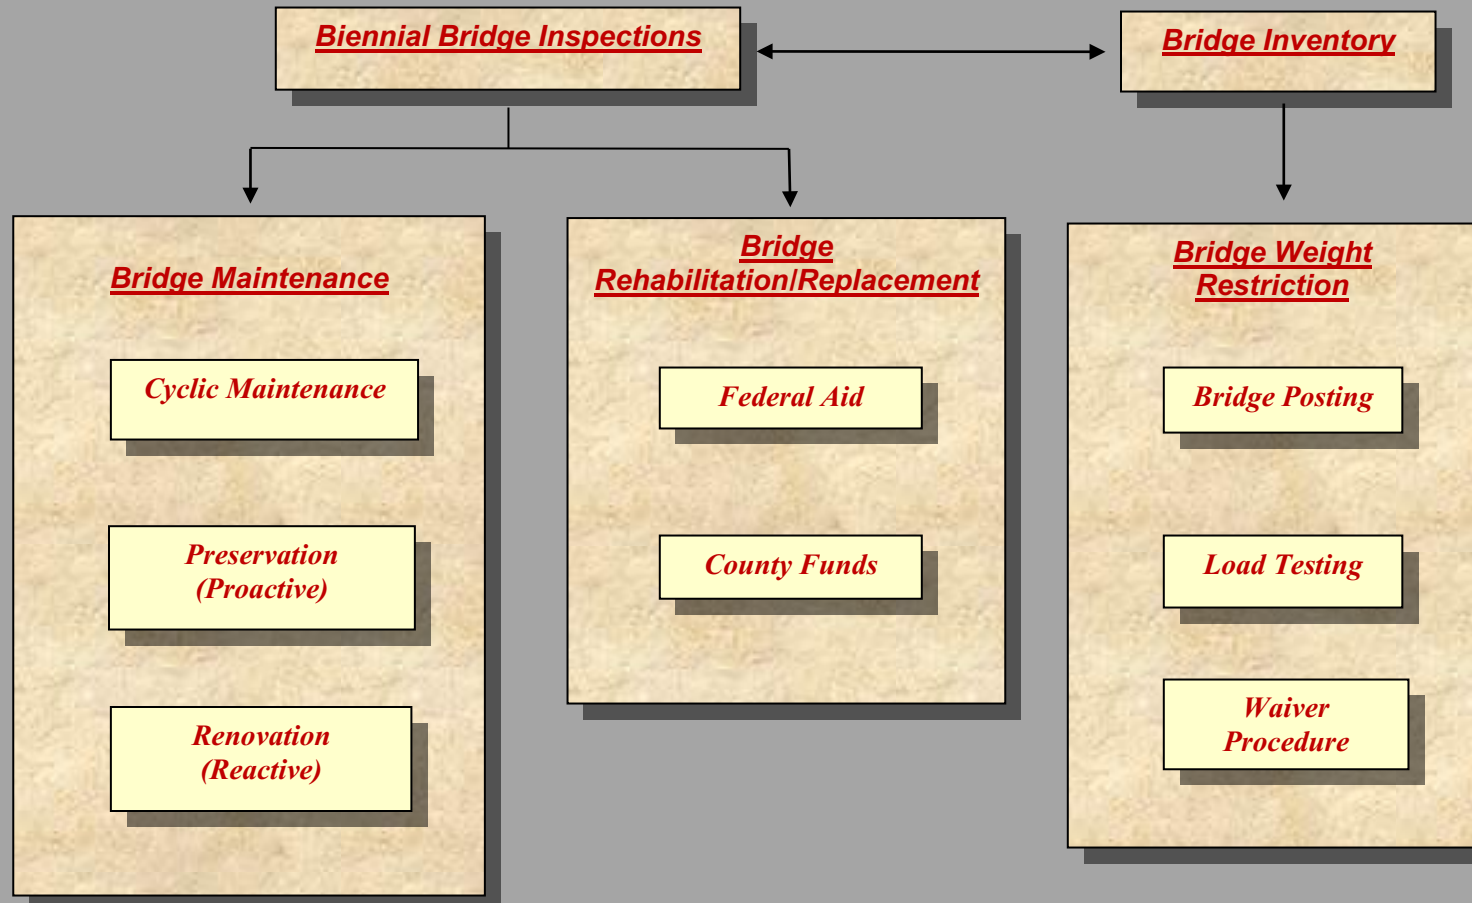

It is essential that structures not classified as deficient be included in a systematic maintenance program. This practice precludes the possibility of premature replacement or rehabilitation. A bridge management program is a viable solution; the longer it is delayed, the worse the bridge situation will become.

BRIDGE MANAGEMENT PROGRAM IN MONTGOMERY COUNTY:

Montgomery County Department of Transportation (DOT) has a systematic approach to bridge maintenance that has led the County to a planned procedure of performing routine major or minor maintenance on all bridges. Our approach eliminates the practice of doing nothing until emergency work is required.

The bridge program in Montgomery County is managed by the Division of Transportation Engineering. The program is based on the National Bridge Inspection (NBI) Program and has five major components: ***Biennial Bridge Inspections; Bridge Inventory; Bridge Maintenance; Bridge Rehabilitation/Replacement; and Bridge Weight Restriction.***

BRIDGE MANAGEMENT PROGRAM IN MONTGOMERY COUNTY

A. Biennial Bridge Inspections:

The 1968 Federal-Aid Highway Act established the National Bridge Inspection (NBI) Program, which required the states to inventory and inspect all structures on the Federal Aid system. Congress later expanded the inspection program to include all bridges on public roads that are off the Federal Aid system as well. The Condition Inspection, as the name implies, provides information on the current condition of the bridges and is fundamental in establishing the structural integrity and serviceability of a bridge. Deterioration of components or the adequacy of the structure, including the approaches and traffic safety features, can only be determined by a thorough Condition Inspection.

Montgomery County Department of Transportation has been inspecting its bridges since 1972. Currently, 476 highway bridges are included into the County's Bridge Inventory. Of these 476 bridges, 262 are defined as **long span** whose clear roadway length carried by the structure is greater than 20 feet. The remaining 214 are defined as **short span** whose clear roadway length carried by the structure is greater than 6 feet but less than or equal to 20 feet.

The costs for the inspection of long span bridges are covered by Federal Aid for bridges. The County funds the inspection of all the short span bridges. Fifty-four of the 476 bridges inspected by the County are owned and maintained by various municipalities within the County. Seventeen of the 476 bridges inspected by the County are owned by the Maryland-National Capital Park and Planning Commission and maintained by the County. The maintenance costs outlined in this report do not include the maintenance costs related to the bridges owned by municipalities. The above bridges do not include the thirty-seven pedestrian structures inspected by the County. Three of the thirty-seven pedestrian structures are owned and maintained by the Maryland-National Capital Park and Planning Commission and two of the thirty-seven are owned and maintained by the Montgomery County Division of Parking Management. The County's pedestrian structures are inspected and maintained at the County's expense.

The inspection cycle is 2 years for long span highway bridges, and 4 years for short span highway bridges and pedestrian structures due to the limit of the County funds. Short span highway bridges and pedestrian structures are together divided into two groups and inspected alternately every other biennial cycle. Exception is made to eight pedestrian structures spanning over a highway or railroad, and one pedestrian structure supporting a railroad. These pedestrian structures will be inspected biennially.

B. Bridge Inventory:

The Bridge Inspection is complementary to the Inventory. The 2017 Bridge Inventory Summary provides a count and state of the County's bridges based on the federally mandated structure inventory and appraisal requirements. These requirements provide the needed data in developing the bridge maintenance management program in the County.

C. Bridge Maintenance:

At the foundation of any good bridge maintenance program is an inventory of maintained bridges, including accurate information on the maintenance procedures. Many bridges exist that are currently classified as deficient either structurally or

functionally. Montgomery County currently has 47 bridges that are weight restricted and 33 bridges that are considered as one-lane bridges (clear roadway width of 17 feet or less). Maintenance cannot improve bridges that are functionally deficient since this implies dimensional or geometric problems. Functionally deficient structures are replaced or rehabilitated under the County's Federal Aid bridge replacement and rehabilitation program or County Funding.

Many structurally deficient bridges have reached this condition due to factors such as increased live loadings, heavy salt applications, lack of proper periodic maintenance, and unanticipated events (flooding, accidents, etc.). Damage resulting from plugged scuppers and drains, leaky joints, rutted wearing surfaces, and peeled paint accelerate deterioration and compound repair requirements year after year. If left unrepaired, the damage ultimately imposes a severe limitation on the operational capabilities of the structure.

Montgomery County includes the Bridge Maintenance activities in the following three groups: I - maintenance performed at specified intervals referred to as **Cyclic Maintenance**, II – preventive maintenance performed to preserve bridge components referred to as **Preservation (Proactive)**, III - maintenance performed as needed based on the biennial bridge inspections referred to as **Renovation (Reactive)**.

I. Cyclic Maintenance:

This includes systematic scheduled maintenance of the County's bridges. The interval varies according to the type of work or activity. This work is done by the Division of Highway Services, and is independent of the bridge inspection program managed by the Division of Transportation Engineering. Examples of these activities include such tasks as: cleaning decks, beam seats, and salt splash zones; cleaning drainage systems; cleaning expansion joints; cleaning and lubricating expansion bearing assemblies; removing debris from the stream; removing vegetation to clear bridge structures, and sealing concrete decks or substructure elements.

A list of scour critical bridges will be provided to the Division of Highway Services after all the inspections of each biennial inspection cycle are complete. The Division's highway service team will inspect those bridges susceptible to flooding after flood events, and repairs flood damages including undermining and debris. The highway service will provide the Division of Transportation Engineering with inspection and maintenance records for this work.

II. Preservation (Proactive):

Preventive Maintenance, commonly referred to as "PM" is the maintenance performed to preserve bridge components. Under ideal circumstances, PM is performed to keep bridges in good condition. Montgomery County's goal is to keep the condition rating of our bridges at "5" or better on a scale from 0 to 9. For the definition of Condition Rating, please refer to the GUIDE FOR READING THE BRIDGE INVENTORY SUMMARY (Item 13) of this publication. A good protective painting program inhibits corrosion and extends the life of any steel structure. The expected life cycle of a coating system is 15 years. In year 1998, the County initiated a preventive maintenance program for its steel beam or truss bridges. In every biennial bridge inspection cycle, bridges will be inspected for painting condition and prioritized for two annual paint repair contracts in the two following years. In addition, in 2013

the County included as part of bridge preservation the repairs of leaky deck joints. Damage both to the joint and to the portion of the bridge beneath the joint that is exposed to debris, water and deicing salts must be addressed and prevented to prolong the life of the bridge. Many defects identified through the Biennial Bridge Inspection Program are the direct result of bridges not being properly protected to withstand chemical and environmental elements. These defects include frozen and deteriorated steel bearings, corroded structural steel, and steel beam section loss.

The County currently owns 116 steel beam or truss highway bridges and 29 steel beam or truss pedestrian bridges. In fiscal year 2003, the County started its first annual paint repair contract. 82 of the 116 highway bridges and 7 of the 29 pedestrian bridges have been repainted under this program since 2003. 11 highway bridges deck joints have been repaired under the 2013 contract. Based on the approved funding for this program for fiscal years 2019 through 2024, approximately 9 bridges will be repainted under each annual paint repair contract in these years.

III. Renovation (Reactive):

This group of maintenance activities is performed when a need is identified by the Federal Biennial Inspection. After completion of each biennial bridge inspection, a list is prepared of the bridges that need rehabilitation beyond the extent of Cyclic Maintenance to assure their safe and continuous use as components of the transportation infrastructure. The types of work identified are: deck replacement with corrugated metal planking or laminated wood, replacement of superstructure beams, replacement of bearing devices, and replacement of concrete backwalls or wingwalls. The associated cost for these repairs is usually greater than or equal to \$20,000 per bridge. Using this methodology, after the 2017 inspection cycle, 160 structures are in need of bridge renovation, with a total cost estimated at \$10,860,812 to complete.

Most of the bridge renovation program repair work is performed by the County's specialized bridge crews whose usual sole function is bridge repair. With the technical advice from Transportation Engineering staff, the highly experienced bridge crews work from sketches and/or verbal direction, which saves significant amounts of time and money. Contractors are hired only to perform the repair work that is beyond the resources of the County's bridge crews.

The photographs shown on pages 6 and 7 depict typical deficiencies on different bridges, which are addressed through our Bridge Renovation program. Failure to make these repairs can lead to much higher costs for bridge rehabilitation or replacement.

D. Bridge Rehabilitation/Replacement:

Under this program, replacement or major rehabilitation of the County's bridges is implemented for those structures that are functionally obsolete or structurally deficient beyond maintenance. Based on sources of funding, the bridges under this program have been divided into the following two groups:

I. Federal Aid:

Starting from 1980, each year, Federal Aid Programs provide funding to support local governments for highway, highway safety, transit and other surface transportation programs. There are two factors required to make a bridge eligible for federal funding: 1) clear span greater than 20 feet and 2) the sufficiency rating equal to or less than 80 for major rehabilitation and equal to or less than 50 for total replacement. For the definition of Sufficiency Rating, please refer to the GUIDE FOR READING THE BRIDGE INVENTORY SUMMARY (Item 8) of this publication. Currently, there are eleven projects in the approved CIP that are partially funded by the Federal Aid. They are:

Bridge No.	Roadway Name	Crossing	Sufficiency Rating (%)	Status	Construction Start (FY)	Estimated Total Cost (\$000)
M-353	Elmhirst Parkway	Rock Creek Tributary	39.8	Complete	16	2,500
M-021	Piney Meetinghouse Road	Watts Branch	49.0	Complete	17	4,025
M-096	Gold Mine Road	Hawlings River	38.6	Under Construction	17	5,299
MPK-03	Park Valley Road	Sligo Creek	48.6	Under Construction	17	3,950
MPK-24	Beach Drive	Silver Creek	48.3	Final Design	19	4,200
M-352	Garrett Park Road	Rock Creek	7.0	Preliminary Design	22	4,000
M-194	Dennis Avenue	Sligo Creek Tributary	78.9	Preliminary Design	22	5,610
M-064	Brink Road	Great Seneca Creek	39.1	Preliminary Design	23	3,000
M-043	Mouth of Monocacy	Little Monocacy River	29.4	Planning Stage	TBD	TBD
M-015	Glen Road	Piney Branch	27.2	Planning Stage	TBD	TBD
M-121	Zion Road	Hawlings River	9.3	Planning Stage	TBD	TBD

II. County Funds:

Short span bridges and emergency projects do not qualify for Federal Funding; therefore the County Council approves funding for major bridge rehabilitation and replacement of the short span bridges and emergency projects. The current CIPs include the following eleven projects:

Bridge No.	Roadway Name	Crossing	Sufficiency Rating (%)	Status	Construction Start (FY)	Estimated Total Cost (\$000)
M-198	Pennyfield Lock Road	Muddy Branch Tributary	17.8	Complete	16	1,110
M-308	Germantown Road	Great Seneca Creek Trib.	16.9	Complete	16	1,200
MPK-18	Agricultural Farm Park Entrance	Rock Creek	97.9	Complete	16	500
M-231	Kinster Drive	Little Seneca Creek Trib.	56.0	Complete	18	1,500
M-030	Montevideo Road	Dry Seneca Creek	15.7	Under Construction	18	1,400
M-289	Quince Mill Drive	Muddy Branch Trib.	53.3	Final Design	18	1,250
M-415	River Road	Potomac River Trib.	71.7	Final Design	19	1,250
M-394	Falling Creek Road	Paint Branch Trib.	55.7	Final Design	19	1,250
M-440	Belfast Road	Potomac River Trib.	64.7	Final Design	19	1,250
P-14	Valleywood Drive Pedestrian Bridge	Joseph's Branch	0.0	Preliminary Design	19	1,400
M-229	Brighton Dam Road	Brighton Dam	77.2	Preliminary Design	20	1,860

E. Bridge Weight Restriction:

After each cycle of biennial bridge inspections, under the Bridge Inventory program, the County carefully evaluates the live load capacity (rating) for each bridge based on the condition of the structural components and their foundations and determines the weight restriction limits, if necessary. The approach used for determining the rating and the weight restriction limits of a bridge is described in the GUIDE FOR READING THE BRIDGE INVENTORY SUMMARY (Items 4 and 5) of this publication. The Bridge Postings and Waiver Procedure are steps that the County follows to impose weight restrictions for bridges.

I. Bridge Postings:

Bridge posting for weight restriction is part of a continuing effort in the County to extend the useful life of structurally deficient bridges and to safeguard the motoring public until the renovations or replacements can be implemented. Vehicles which have a gross weight exceeding a bridge's posted limit should not cross that bridge unless a permit is issued by the Montgomery County Department of Transportation (DOT) through the County's waiver procedure.

At the end of each cycle of biennial inspections, a Bridge Inventory Summary, including all the newly posted bridges with their weight limits, is sent to school transportation officials, public transit authorities, fire & rescue units, police, and other requestors. We request that these agencies detour vehicles which have a gross weight exceeding the bridges' posted limits or submit a request for waiver to DOT for evaluation if a detour is not feasible.

Weight restriction violations can result in a shorter service life for bridges whose operational capability is already limited and can even jeopardize structural integrity, potentially endangering the traveling public. The County is striving to remove all weight restriction postings on its bridges in the next few years by either replacing or rehabilitating the posted bridges so the bridges can safely carry all legal loads allowed in the State of Maryland.

II. Load Testing:

In order to minimize the numbers of bridges that require posting for weight restrictions, a Load Testing Program was conducted in 2005. Actual truck loads with various combinations of truck positions were applied to selected weight-restricted bridges. Strain gauges were attached to the beams of bridges to measure actual strain and stress. This provides more accurate live load distribution factors than those in AASHTO Standard Specifications, and may possibly increase the ratings of bridges and eliminate weight restriction. Six posted bridges were tested in 2005. The ratings of these bridges were increased, and exceed Maryland Legal Load Trucks. As a result of that, all the six tested bridges no longer require weight restriction. Twenty-one posted bridges are scheduled to be tested in 2018-2019.

III. Waiver Procedure:

A waiver can be initiated by submitting a written request to DOT for the attention of Mr. Barry Fuss, via mail, fax or email, at least three weeks before the anticipated crossing.

Barry Fuss, Chief Bridge Design
Montgomery County Department of Transportation
Division of Transportation Engineering
Transportation Planning and Design Section
100 Edison Park Drive, 4th Floor
Gaithersburg, Maryland 20878
Tel: 240-777-7261 Fax: 240-777-7277
barry.fuss@montgomerycountymd.gov

The request must clearly describe the ownership, registration state and number, type of vehicle, gross weight of the vehicle, number of axles, spacing between the axles, gross load on each axle, and the date and number of times for the crossing. Insufficient information may result in a delay of the waiver determination.

Upon the receipt of the waiver request, the DOT will perform a structural evaluation or hire an engineering consultant to perform structural analysis and inspect the bridge before and after the crossing if necessary to assure the vehicle safety and the bridge integrity. This will determine if a waiver can be granted. The DOT may deny a request based on safety concerns or issue a waiver for a limited time frame subject to special requirements such as loading limits, operating speed, etc. The applicant is responsible for 100 percent of the consultant's costs if ever needed. In such a case, the County will request the consultant to prepare a cost proposal and forward the proposal to the applicant for concurrence. Upon receipt of the applicant's concurrence, the consultant will start the necessary work immediately. The payment for the consultant's cost will be made by the applicant to the consultant directly.

Highway Bridges under Federal Aid for Rehabilitation/Replacement	Number of Bridges	6	11	<ul style="list-style-type: none"> Costs are for design and construction. Seven (7) bridges under design, two (2) are under construction and two (2) have been completed.
	Estimated Costs	\$24,274,000	\$32,584,000	
Highway Bridges under County Funds for Rehabilitation/Replacement	Number of Bridges	3	11	<ul style="list-style-type: none"> Costs are for design and construction. Six (6) bridges are under design, one (1) is under construction and four (4) have been completed.
	Estimated Costs	\$4,160,000	\$13,970,000	

Note: Unless otherwise noted the numbers above do not include bridges owned by municipalities.

GUIDE FOR READING THE BRIDGE INVENTORY SUMMARY

GUIDE FOR READING THE BRIDGE INVENTORY SUMMARY

1. The information contained in this report is a tabulation of the essential features of all bridges in Montgomery County. This inventory of structures has been divided into two groups based on ownership and maintenance responsibility. The first group consists of bridges located on County rights-of-way including highways and drainage ways. These bridges are owned and maintained by Montgomery County, and the bridge numbers are preceded by the letter M. The second group consists of bridges located in municipalities or parks. These bridge numbers are preceded by the following letters:
 - MG - Bridges owned and maintained by the City of Gaithersburg
 - MPK - Bridges owned by the Maryland-National Capital Park and Planning Commission and maintained by the Montgomery County Department of Transportation
 - MR - Bridges owned and maintained by the City of Rockville
 - MT - Bridges owned and maintained by the City of Takoma Park
 - MK - Bridges owned and maintained by the Town of Kensington
 - MS - Bridges owned and maintained by the Town of Somerset
2. The information contained in the tabulation has been taken from a combination of sources, including: bridge plans, design analysis, field surveys, and the biennial bridge inspections - all of which are filed in individual bridge folders in the Design Section of the Department of Transportation (DOT).
3. By federal definition, a bridge is defined as any highway structure whose length (clear span) is greater than 20 feet. Bridge numbers that are followed by a suffix letter designate structures that are not typical bridge structures. The suffix letters after the bridge numbers indicate the following types of structures.
 - C = Box Culvert
 - P = Pipe Culvert
 - R = Rigid Frame

Also, in this tabulation, bridges that have clear spans 20 feet or less in length have been included. These bridges are designated by the following suffixes after the bridge numbers:

- B = Bridge
- D = Box Culvert
- Q = Pipe Culvert

4. Each highway bridge is rated for the live load capacity at two levels. The first or upper load level, referred to as Operating Rating, is the absolute maximum permissible load level to which the structure may be subjected. The second or lower load level, referred to as Inventory Rating, is the load level that can safely utilize an existing bridge structure for an indefinite period of time.
5. The bridge ratings for the above two load levels are evaluated for the four legal trucks allowed in the State of Maryland. These are:
 - H15 - Truck (Single Unit Truck)
 - HS20 - Truck (Combination Unit truck - in two parts)
 - Type 3S2 (Combination Unit truck - in two parts)
 - Type 4 (Single Unit Truck)

Posting (weight restriction limit) either for the single unit truck or for the combination unit truck is based on the lowest value of the inventory ratings that are less than the gross weight of the truck evaluated.

The diagrams shown in page 28 are the four legal trucks allowed in the State of Maryland.

MARYLAND LEGAL LOAD TYPES

W = TOTAL WEIGHT OF TRUCK AND LOAD

H15 - VEHICLE
WEIGHT - 30 KIPS

TYPE S32 - VEHICLE
WEIGHT - 80 KIPS

W = COMBINED WEIGHT ON THE FIRST TWO AXLES WHICH IS THE AS FOR THE CORRESPONDING H TRUCK.

V = VARIABLE SPACING - 14 FEET TO 30 FEET INCLUSIVE. SPACING TO BE USED IS THAT WHICH PRODUCES MAXIMUM STRESSES.

HS - VEHICLES

TYPE 4 - VEHICLE
WEIGHT - 70 KIPS

6. The following is a list of abbreviations used in this report:

General:

- ADT = Average Daily Traffic Volume*
- BSR = Bridge Sufficiency Rating
- SI&A = Maryland State Highway Administration Structure Inventory and Appraisal
- UNK = Unknown

Structural Type:

- BC = Box culvert
- BTA = Brick Tunnel Arch
- CA = Concrete arch
- CDSBC = Concrete deck with steel beams encased in concrete
- CDSB = Concrete deck with steel beams
- CDTB = Concrete deck with concrete T-beams
- CMP = Corrugated metal pipe
- CMPA = Corrugated metal pipe arch
- CS = Concrete slab
- FRPS = Fiber reinforced polymer slab
- MDSB = Corrugated metal deck with steel beams
- MDTST = Corrugated metal deck with through steel truss
- PCB = Prestressed concrete beam
- PCS = Prestressed concrete slab
- PCCB = Prestressed concrete channel beam
- PCBS = Prestressed concrete box slab
- PCNB = Prestressed concrete NEXT Beam
- PCVS = Prestressed concrete voided slab
- RCCP = Reinforced concrete culvert pipe
- RF = Reinforced concrete rigid frame
- SPA = Structural plate arch
- SPPA = Structural plate pipe arch
- TSB = Timber Slab Beams
- TDSB = Timber deck with steel beams
- TDTSG = Timber deck with through steel girders
- TDTST = Timber deck with through steel truss

Roadway Functional Classification:

- A = Arterial Road
- B = Business
- CA = Country Arterial Road
- CR = Country Road
- ERR = Exceptional Rustic Road
- IRR = Interim Rustic Road
- M = Major Highway
- PR = Primary Residential Road
- RR = Rustic Road
- SR = Secondary Residential Road

*Some ADT's calculated using MNCPPC annual growth rates.

7. ADC Map Grid (5166-B-2) - Numbers are taken from the Montgomery County ADC Map Grid, 41st Edition:

- First number - (5166) is the page number
- Second number - (B) column letter
- Third number - (2) row number

8. Bridge Sufficiency Rating - Is calculated based on a method of evaluating bridge inspection data by calculating the four separate factors on page 33 to obtain a numeric value, indicative of bridge sufficiency, to remain in service.

Bridge Sufficiency Rating = $S_1 + S_2 + S_3 - S_4$. The result is a percentage in which 100 percent would represent an entirely sufficient bridge and zero percent would represent an entirely insufficient or deficient bridge. This value is calculated by the Maryland State Highway Administration's computer program for consistency.

9. Roadway Width - Clear roadway width of the structure.
10. Structural Length - The total length of the structure. For pipes and culverts it is the length along the centerline of the culverts or pipes.
11. Span Length - Center line of bearing to center line of bearing for the bridge. For pipes and culverts, the length is measured along the center line of the roadway between inside faces of exterior walls. The values inside the parenthesis following the span length are the clear widths of the openings of pipes or culverts.
12. Structural Evaluation (SI&A Item #67) - The purpose of this item is to evaluate the overall condition of the structure taking into account all major structural deficiencies based on conditions of superstructure, substructure, and inventory rating. This item is coded with a 1-digit code that indicates the appraisal rating for the item. The rating ranges from 0 to 9. "9" is the superior condition, a "5" is somewhat better than minimum adequacy, to tolerate being left in place as is, 3 is intolerable, requiring high priority for corrective action, and 0 indicates the bridge is closed.
13. Scour Critical (SI&A Item #113) - The purpose of this item is to identify existing bridges that can potentially become damaged by scour, so that appropriate measures can be taken to protect those bridges. The following is the description for the codes:
 - N - Bridge not over waterway
 - 9 - Bridge foundations (including piles) well above flood water elevation
 - 8P - Bridge is a structure with a full length paved bottom.
 - 8L - Bridge has been evaluated/assessed in the field and office as a low risk structure; no further study is planned
 - 7 - Counter measures have been installed since the original construction to correct a problem with scour; bridge is no longer scour critical.
 - 6 – Scour calculations/evaluation has not been made.
 - 5A – Bridge foundations determined to be stable due to assessment. Streambed is determined to be within the limits of footings or piles. No scour has been found during any inspection of this bridge. The potential risk of failure during or immediately after a flood event is considered low. No actions are planned other than monitoring.
 - 5B – Bridge foundations determined to be stable due to assessment of scour conditions. Streambed is determined to be within the limits of footings or piles. Scour has been found during an inspection. The potential risk of failure during or immediately after a flood event is considered to be moderate. No actions are planned other than monitoring.
 - 5C - Bridge foundations determined to be stable for calculated scour condition. Streambed is determined to be within the limits of footings or piles or by calculations.

- 4 - Bridge foundations determined to be stable on the basis of a field and office scour evaluation or analysis; bridge inspection reveals that action is required to protect exposed piles from effects of additional erosion and corrosion.
- 3 - Bridge is scour critical; bridge foundations determined to be unstable for assessed or calculated scour conditions. Scour within limits of footing or piles or scour is below spread footing base or pile tips. Monitoring is to be performed until scour countermeasures are in place.
- 2 - Bridge is scour critical; field review indicates that extensive scour has occurred at a bridge foundation. Immediate action is required to provide scour countermeasures.
- 1 - Bridge is scour critical; field review indicates that failure of piers/abutments is imminent. Bridge is closed to traffic.
- 0 - Bridge is scour critical; bridge has failed and is closed to traffic.

14. Roadway Functional Classification - The purpose of this item is to identify the functional classification of the roadway that a bridge carries. In Montgomery County, each roadway generally is classified in one of the following categories based on the degree to which the roadway is to provide traffic service and land service.

- Freeway (F) - provide total traffic service and no land service.
- Major Highway (M) - provide a high level of traffic service and a low level of land service. In older areas of Montgomery County, such as Kensington-Wheaton, roads designated as major highways also provide access to much commercial and residential development.
- Arterial Road (A) - provide a medium level of traffic service and a moderate level of land service. These roadways carry traffic between major highways but also provide access to local development.
- Primary Residential Road (PR) - provide a moderate level of traffic service and a medium level of land service. A primary residential road is the local traffic collector for vehicles traveling between higher level roads (arterials and major highways) and residences (many of which are located along secondary residential roads).
- Secondary Residential Road (SR) - provide a limited traffic service and a high level of land service. Secondary residential roads are not intended for use by traffic passing through the residential community.
- Country Arterial Road (CA) - to be used in the rural area of the county instead of the arterial road classification.
- Country Road (CR) - to be used in the rural area of the county instead of the primary residential road classification.
- Rustic Road (RR) - A road within the Agriculture Reserve or adjoining rural areas (areas where the majority of zoning is RDT, RC, or rural) in Montgomery County, which enhances the rural character of the area due to its particular configuration, alignment, scenic quality, landscaping, adjacent views and historic interest, and which exemplifies the rural and agricultural landscape of the county.
- Interim Rustic Road (IRR) - Designation as a Rustic Road has been proposed, but is not officially approved.
- Exceptional Rustic Road (ERR) - having such unusual and pleasing character as it exists today that preservation of the road in its current state is highly desirable. The road has special characteristics which contribute significantly to the rural, scenic, or historic features of Montgomery County and might lose these specific characteristics if improved or widened.

The roadway functional classification provided in this publication for each roadway is for reference only and is based on the Montgomery County Master Plan of Highway dated April 2005 and the Map of Montgomery County Rustic and Exceptional Rustic Roads Country Roads and County Arterial dated April 2004. The information following the classification is the assigned classification number. The latest Master Plans should be used to determine the current functional classification and number of a roadway.

15. Water Use - The Maryland Department of the Environment applies distinct designated water uses for the surface waters of the State, each having a specific set of standards. Below are water uses for the surface waters in Montgomery County.
 - Use I – Water Contact Recreation & Protection of Aquatic Life - Waters that are suitable for: water contact sports; play and leisure time activities where the human body may come in direct contact with the surface water; fishing; the growth and propagation of fish (other than trout); other aquatic life, and wild life; agricultural water supply; and industrial water supply. The stream channel must not be disturbed during the period of March 1 through June 15 for fish spawning or migration within waterways.
 - Use I-P – Water Contact Recreation, Protection of Aquatic Life, Public Water Supply - Waters that suited for all uses identified in Use I and use as a public water supply. The stream channel must not be disturbed during the period of March 1 through June 15 for fish spawning or migration within waterways.
 - Use II – Shellfish Harvesting Waters – None in Montgomery County.
 - Use III – Natural Trout Waters - Waters that are suitable for the growth and propagation of trout and that are capable of supporting self sustaining trout populations and their associated food organisms. The stream channel must not be disturbed during the period of October 1 through April 30 for fish spawning or migration within waterways.
 - USE III-P – Natural Trout Waters and Public Water Supply - Waters that include all uses identified for Use III waters and use as a public water supply. The stream channel must not be disturbed during the period of October 1 through April 30 for fish spawning or migration within waterways.
 - Use IV – Recreational Trout Waters - Waters that are capable of holding or supporting adult trout for put and take fishing, and that are managed as a special fishery by periodic stocking and seasonal catching (cold or warm waters). The stream channel must not be disturbed during the period of March 1 through May 31 for fish spawning or migration within waterways.
 - Use IV-P – Recreational Trout Waters and Public Water Supply - Waters that include all uses identified for Use IV waters and use as a public water supply. The stream channel must not be disturbed during the period of March 1 through May 31 for fish spawning or migration within waterways.
16. The information contained here summarizes the content of each structure's individual inspection report. In case of conflicts in information, the information from the original report prevails.
